# What Do You Mean?

# What's the Problem?

Avoiding Exceptions

# Avoid Exceptions

RegionManager

- ContentRegion

## Exception

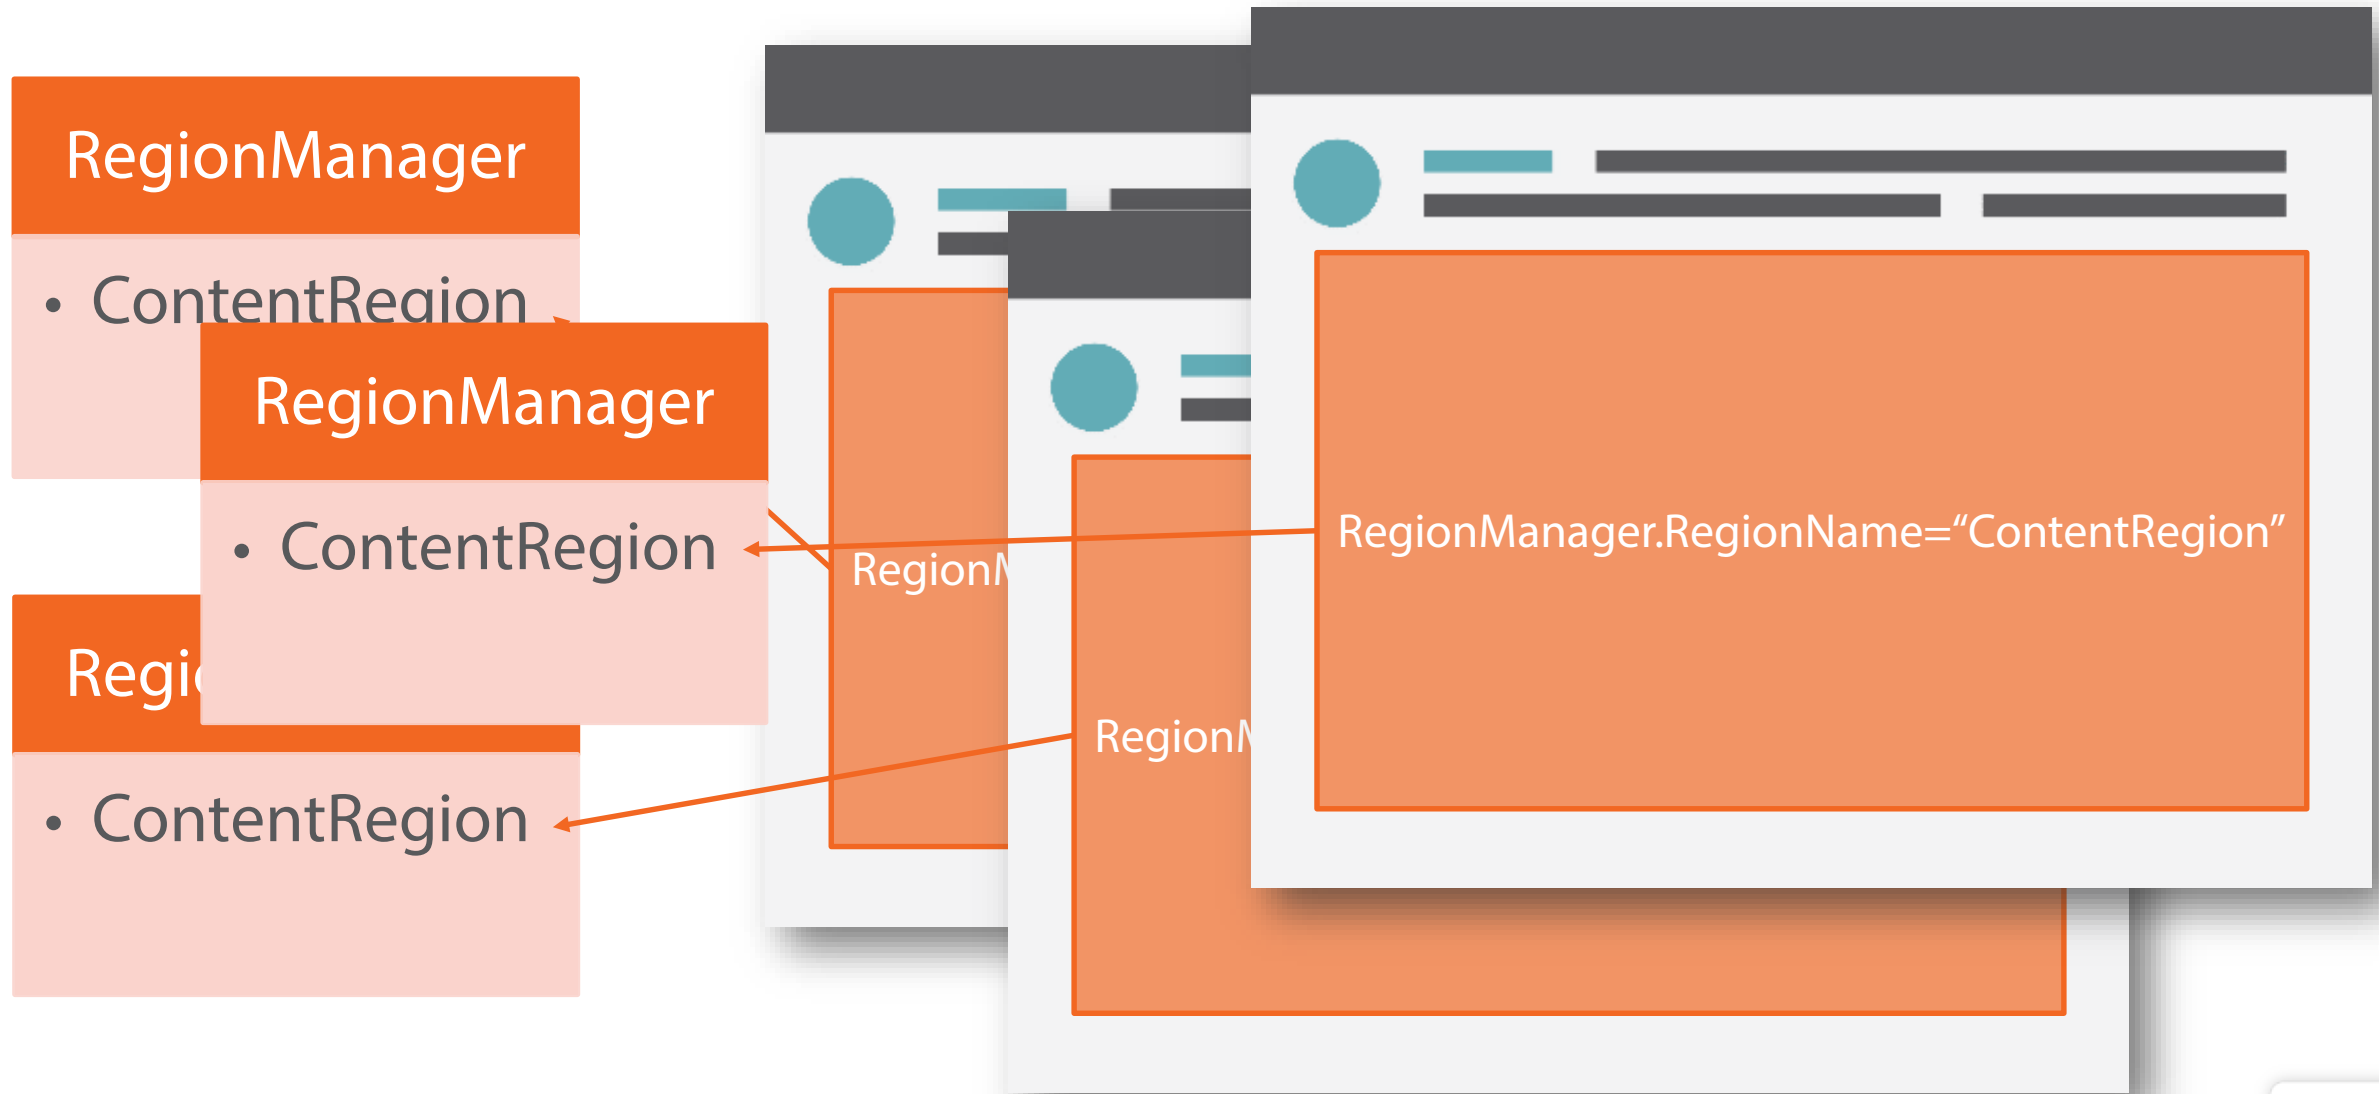

```
RegionManager.RegionName="ContentRegion"
```

# A Solution with a Problem

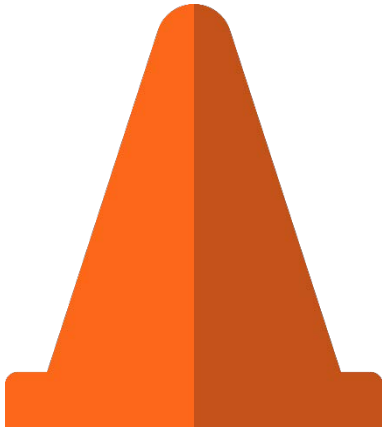

ScopedRegion

# Scoped Regions

# What's the Problem with the Solution?

Navigation doesn't support  
ScopedRegions

# Creating Scoped Regions

```
IRegion region = regionManager.Regions["ContentRegion"];  
View view = container.Resolve<View>();  
IRegionManager scopedRegion = region.Add(view, null, true);
```

```
View view = container.Resolve<View>();  
IRegionManager scopedRegion = regionManager.CreateRegionManager();  
RegionManager.SetRegionManager(view, scopedRegion);
```

# Navigation

```
IRegion region = regionManager.Regions["RegionName"];  
Region.RequestNavigate("View", parameters);
```

```
regionManager.RequestNavigate("RegionName", "View", parameters);
```

# Navigation

```
IRegionManager scopedRegion = region.Add(view, null, true);
```

```
regionManager.RequestNavigate("RegionName", "View", parameters);
```

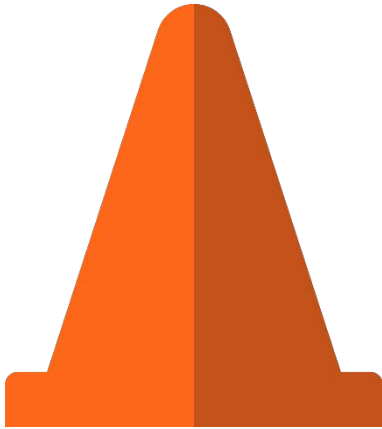

# What's the Solution?

Custom RegionNavigationContentLoader

# What's the Problem?

Navigating within the proper TabItem

# Which TabItem Gets the View?

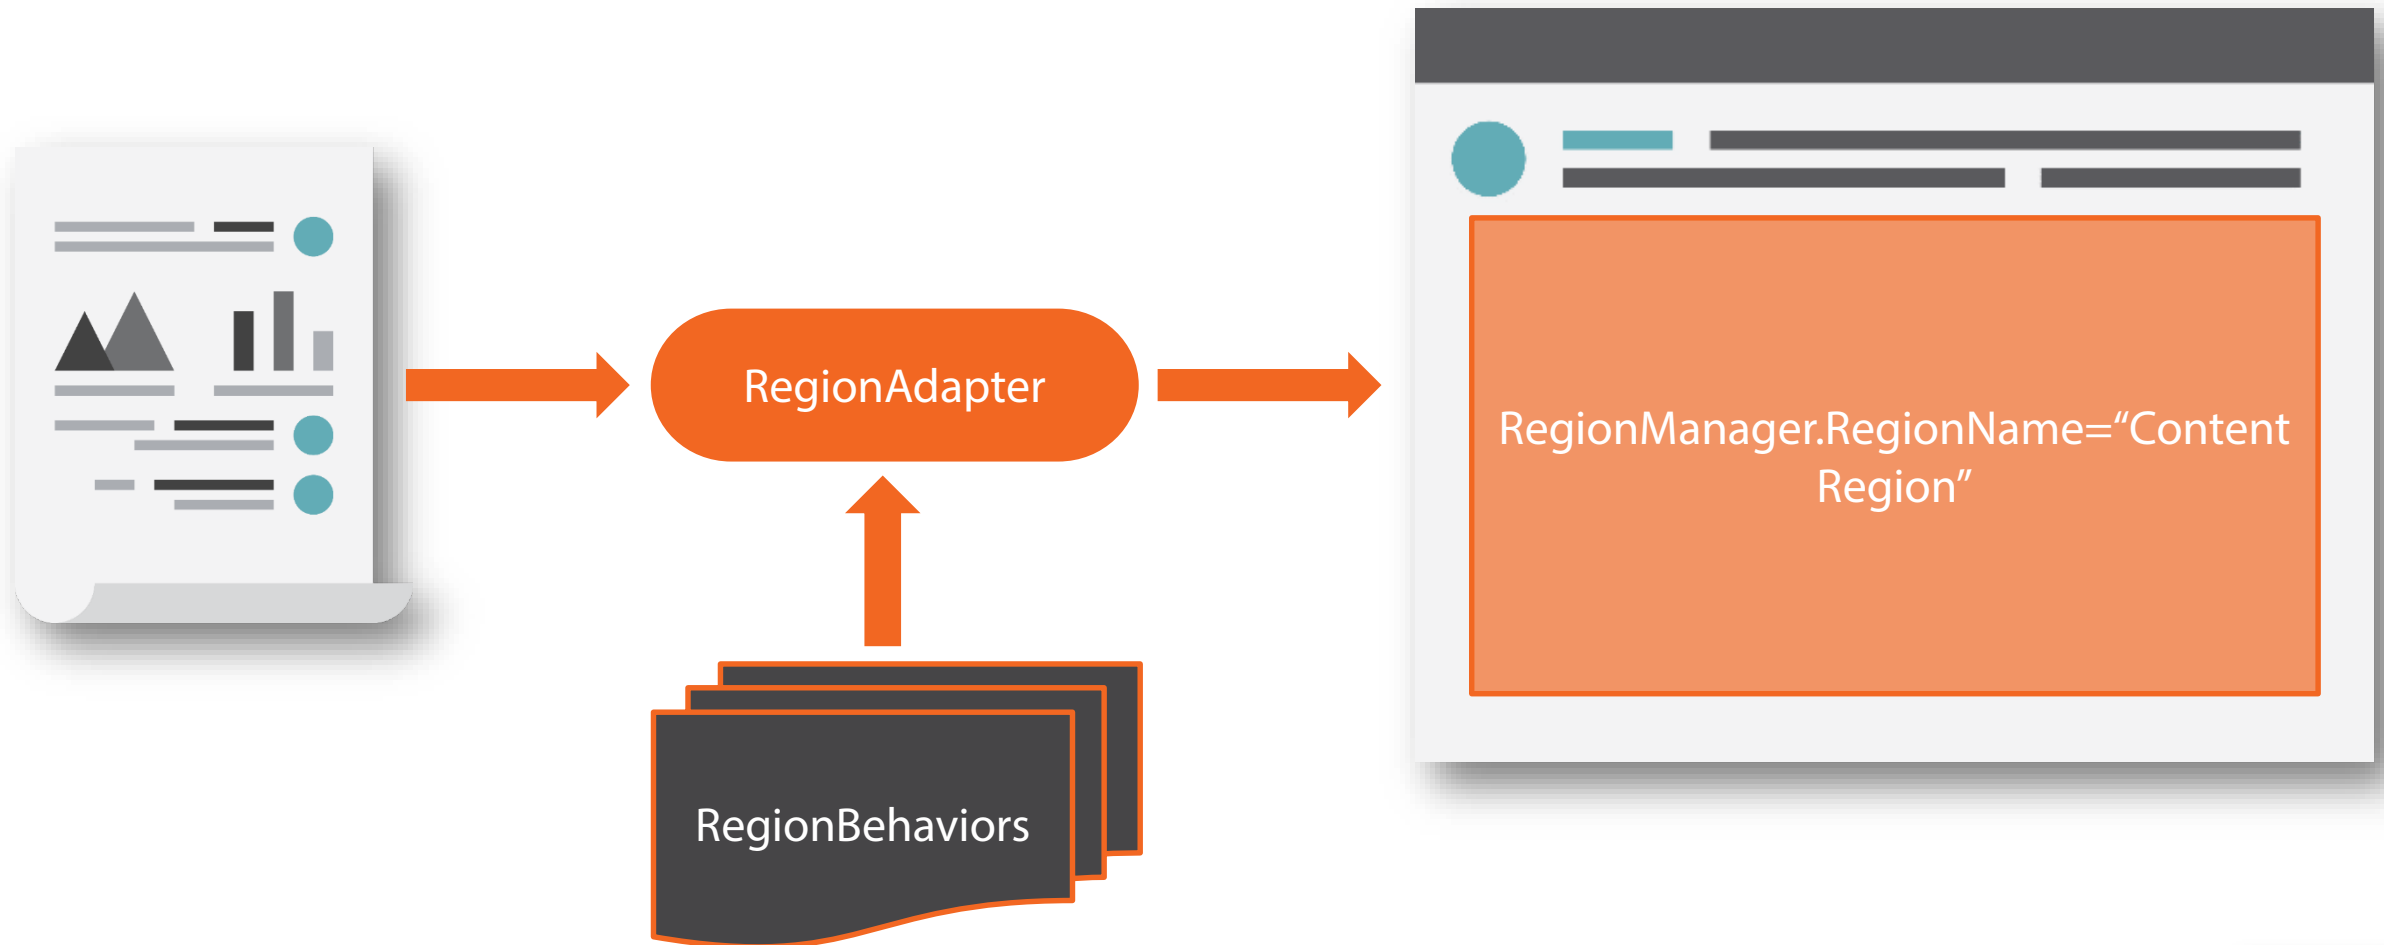

# What's the Solution?

RegionBehavior

# Region Behaviors

# What's Next?
