What's the Problem

Avoid exceptions

Avoid Exceptions

RegionManager

- ContentRegion

Exception

```
RegionManager.RegionName="ContentRegion"
```

What's the Solution?

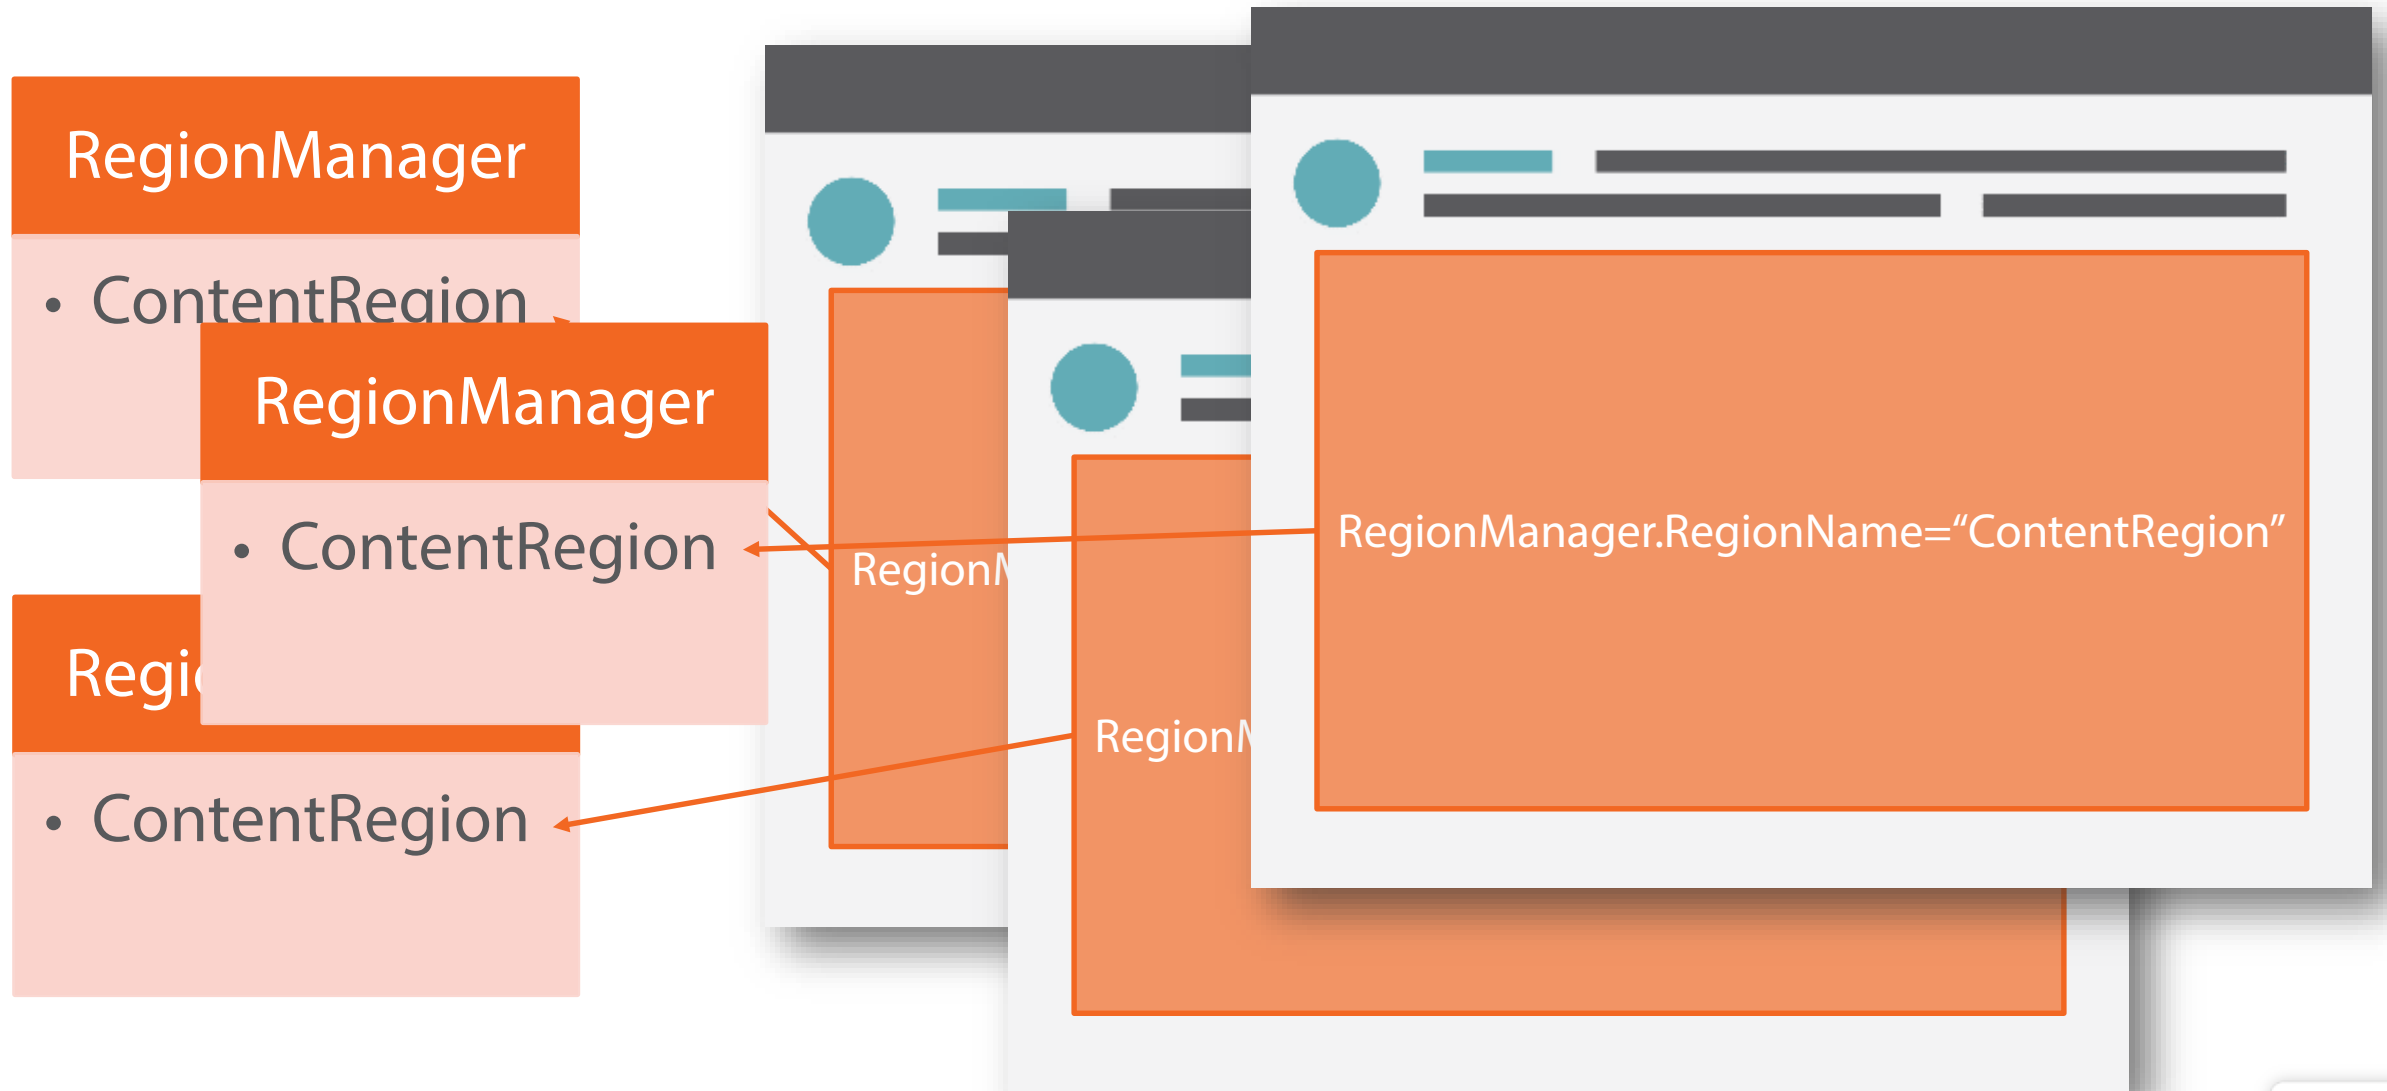

Scoped Regions

Creating Scoped Regions

```
IRegion region = regionManager.Regions["ContentRegion"];  
View view = container.Resolve<View>();  
IRegionManager scopedRegion = region.Add(view, null, true);
```

```
View view = container.Resolve<View>();  
IRegionManager scopedRegion = regionManager.CreateRegionManager();  
RegionManager.SetRegionManager(view, scopedRegion);
```

Scoped Regions
